Computer Science student at IIIT Sri City pursuing a parallel BS Degree in Data Science and Applications from IIT Madras.
Interested in Software Engineering, Full Stack Development, AI systems, Data Science and Data Analytics.
Experienced in building backend-driven applications, workflow-oriented platforms, and research-focused AI projects involving computer vision and graph-based routing.

Education

Indian Institute of Information Technology Sri City (IIIT SriCity) (2024-2028)
B.Tech in Computer Science and Engineering | CGPA : 7.94
Indian Institute of Technology Madras (IIT Madras) (2024-2028)
BS in Data Science and Applications | Diploma level (Current) | CGPA : 7.26
12th (Intermediate) – Tirumala Junior College (2024)
Percentage: 98% (980/1000)
10th – Tirumala Proactive School (2022)
Percentage: 94.8% (569/600)

Projects

1) Structure Aware Raster- Vector Integration for Post-Landslide Assessment for Routing

Tech Stack: AI, ML, Deep Learning, Computer Vision, Remote-Sensing, Graph-Based Routing, GIS

- Implementing a post-landslide disaster management system using raster-vector integration.
- Working on multiclass semantic segmentation techniques using ChangeMask methodology
- Preparing and preprocessing pre-disaster and post-disaster remote-sensing datasets for segmentation and spatial analysis tasks.
- Implementing graph-based routing techniques for identifying safer emergency traversal paths after road-network disruption.

2) PathCarys — Placement Portal [link](#)

Tech Stack: Python, Flask, HTML, CSS, JS, SQL, SQL Alchemy

- Designed and developed a placement management platform connecting students, recruiters, and administrators through role-based workflows.
- Structured relational database schemas for students, companies, placement drives, applications, departments, and skill management.
- Implemented backend workflows for placement drive creation, eligibility filtering, and application tracking using Flask and SQLAlchemy.
- Designed entity relationships and modular workflows for managing recruitment processes and student-company interactions.
- Worked on authentication and role-based access control for students, recruiters, and administrators.
- Worked on practical workflow design based on real-world placement process requirements.

3) PlayCarys — Online Multiplayer Game Management Platform [link](#)

Tech Stack: HTML, CSS, JavaScript, NodeJS, NestJS, MySQL

- Led and actively developed a team-based full stack project for managing players, publishers, tournaments, gaming sessions, and reports.
- Coordinated module-level development, workflow integration, and feature planning across the project team.
- Implemented CRUD operations and role-based workflows using NestJS backend architecture.
- Worked extensively with JavaScript DOM manipulation, event handling, and dynamic frontend interactions.
- Integrated frontend forms with backend APIs and database workflows for data creation, updating, and retrieval operations.
- Worked on structured backend modules for handling player management, and session tracking.

Course Works and Technical Skills

Course Works:

DSA, OOPS, Computer Architecture, Operating Systems, DBMS, Computer Networks, Theory of Computation

Programming Languages: Java, Python, C, JavaScript, SQL

Web & Backend: HTML, CSS, JavaScript, NodeJS, NestJS, Flask

Frontend: React, VueJS

Databases: MySQL, PostgreSQL

Data Science: Data Science Fundamentals, Statistics, ML Foundations, ML Techniques

Tools: Git, GitHub, VS Code

Domain Expertise

Software Development, Data Science, Data analysis, Full Stack development, Database management System

Certifications and Achievements

- IIT Madras BS Degree in Data Science and Applications — Foundation Level Certificate [link](#)
- Led the full stack online multiplayer game management system with the team of 6 members effectively
